8mm, 5mm Proximity Probe TM0180 and TM0105 Systems

Introduction to proximity probe transducers

Proximity probe transducers are used to measure the static and dynamic distance between the target and the probe. ProvibTech's TM series proximity probes measure the following:

- ✓ Radial vibration used for indicating bearing condition and measuring machine malfunctions such as rotor imbalance, misalignment, and shaft crack.
- ✓ Axial thrust position used for determining thrust bearing wear or potential bearing failure.
- ✓ Shaft radial position used for determining shaft position relative to rotor attitude angle, an indicator of rotor stability and shaft alignment.
- ✓ Vibration amplitude and phase angle used for diagnostic information in Polar and Bode formats or for vector monitoring.
- ✓ Eccentricity used to measure the shaft bow during startup of large turbine machinery.
- ✓ Phase reference used for measuring shaft rotation speed and phase angle of shaft vibration for monitoring and diagnostic purposes.

The TM series proximity probe systems are designed to meet API 670 standards. Each system consists of a probe, extension cable, and a driver. ProvibTech's transmitters (DTM and TR series) can directly interface with the probe and extension cable; therefore, eliminating the need of a probe driver. This smart design allows for easier field installation and greater economical benefits.

Components of proximity probe transducers

Probe

The TM0180 (8mm) and the TM0105 (5mm) probes are designed for long life cycles and are suitable for harsh environments. ProvibTech realizes one of the most significant problems in proximity probe installations are ground loops and loss of isolation due to damaged cable jackets. ProvibTech's custom rugged cable jacket prevents the probe cable from breaking and tearing and is highly resistive to corrosive environments.

The TM0180 probe and extension cable are equipped with a standard protective rubber boot, which covers the connectors and prevents oil and dirt penetration.

The TM0180 and TM0105 series probes come in 0.5m and 1.0m cable lengths, as well as, special lengths of 5.0m and 9.0m with an integrated probe and extension cable design.

The probe may be selected in English or metric units, as well as, reverse mounting options. Reverse mount probes are used with TM0393 probe housings for hazardous areas.

Extension Cable

ProvibTech's extension cable design results in better system performance and a longer life cycle.

One may select various extension cable lengths based on the probe cable length. The total length of the probe and the extension cable need to be 5m or 9m in total length.

The connector on the extension cable is also an API 670 standard, allowing compatibility with other manufacturers' proximity probe systems.

Driver

The TM0182 driver is used for the TM0180 and TM0105 proximity probe systems. The circuit isolation from ground is a standard feature for all ProvibTech's drivers. The total length of cable between the probe and the driver should be 5m or 9m. The distance between the driver and the vibration monitor can be up to 300m (1,000 ft). The three conductor shielded cables from the probe driver should be used to connect to a vibration monitor, such as, ProvibTech's PT2060 monitor.

Note: Probe Driver is not required with some models of DTM or TR Transmitters.

Hazardous Area

The TM0180 and TM0105 proximity probe transducers have hazardous area approvals. Please consult ProvibTech for further information.

System Specifications

Electrical

Power Supply:
  Voltage: -23 to -30VDC
  Current: < 12mA
Linear Range:
  2.0mm (80mils) begins at 0.25mm (10mils) from probe face (AISI4140)
  Range is 0.25 - 2.25mm (10 - 90 mils)
Sensitivity:
  7.87 mV/um (200mV/mil)
Temperature Sensitivity (Normal):
  Probe and 5 meters cable, from -35°C to 120°C, tolerance is within ±0.3%/ ^{o}C in the middle of the linear range. At 2.25mm (90mil), nominal ±0.5%/ ^{o}C
Linearity (deviation from straight line):
  Within±0.0254mm (±1.0 mil) of a straight line, when calibrated as a system. ±0.038mm (±1.5mil) typical including interchangeability errors
Frequency Response (±3db):
  0 - 10.0 KHz
Minimum Target Size:
  15mm (0.6 inch) in diameter

Environmental

Probe Driver Temperature:
  Operation: -40°C to +80°C
  Storage: -50°C to +100°C
Probe Temperature:
  Operation/Storage: -40°C to +177°C
Extension Cable Temperature:
  Operation/Storage: -40°C to +177°C
Humidity:
  100% non-condensing
Approval:

  ATEX: II 1 G, EEx ia IIC T4@Ta=-40 ^{o}C~+80°C
      KEMA06ATEX0217X

  CSA: Intrinsically safe.
        Class I, Div. 1, Groups A, B, C and D， T4
        Class I, Zone 0, Ex ia llC T4
      Non-incendive
        Class 1, Div. 2, Groups A, B, C and D
  PCEC: Ex ia IIC T4
  GOST R: 0ExiaIICT4
Probe and cable approval:

  ATEX: II1G, ExiaIICT4@Ta=-55 ^{o}C~+115 ^{o}C,

   II2G, ExiaIICT2@Ta=-55 ^{o}C~+232 ^{o}C
